

CANADA'S FINEST STOVES

The Classic & The Super 27 Gas Stoves

PACIFIC ENERGY FIREPLACE PRODUCTS LTD.

The Classic

Since 1978, Pacific Energy has been dedicated to supplying comfort to homes with the finest heating products available,

The Classic and The Super 27 Gas Stoves incorporate all the high-performance benefits that today's gas stove technology has to offer. Impressive heat output, high efficiency ratings, and user-friendly operation.

Further proof of our commitment to quality and innovation is the Lifetime Warranty on all of our appliances. We know of no better guarantee in the hearth industry.

Please take time to enjoy this brochure and imagine the possibilities for your home. We believe you will find something inside that will fit your style and warm your life. We look forward to keeping our commitment to you.

The Super 27

The Classic and the Super 27 Gas Stoves

All the captivating appeal of a real log fire

The Classic and The Super 27's captivating flame pattern is the result of a technically advanced burner design and new log placement that create the natural beauty of a real log fire. Unlike other gas stoves, the flames won't disappear when you turn down the heat.

Fully controllable heat output

The Classic and The Super 27's Heat Extraction System delivers a combination of radiant and convection heat to warm every area of your home. And when it gets too warm you can turn down the heat to a more moderate setting by a one touch-control. (Or choose the optional wall Thermostat Control.)

Porcelaine Enamel The finish of a lifetime

The Classic Gas Stove is available in your choice of four vitreous porcelain enamel finishes. Each colour is guaranteed to retain its luster and will not fade from intense heat even after a lifetime of use. The Super 27 Gas Stove is finished in Metallic Black.

CLEARANCES

VENTING OPTIONS

Because The Classic Gas and The Super 27 Gas Stoves can be converted for either conventional or direct-vent application, it can be installed virtually anywhere in your home.

DIRECT VENTING

Where there is access to an outside wall, the vent pipe can be extended horizontally through the wall to a maximum of 10 ft. In vertical applications, the vent pipe can be installed through a roof to a maximum of 40 ft. from the appliance.

CONVENTIONAL VENTING

By using our unique B-Vent Adapter, The Classic Gas and the Super 27 Gas Stoves can be easily installed with any standard B-Vent system or vented through an existing masonry or factory built chimney.

Please consult owner's manual for complete instructions.
